Version control table

Version	Date	Author	Description of changes
1.0	6/14/2026	Joshua	Added table and version control table with signature.
1.1	6/14/2026	Jephete Fenelon	Updated document formatting and incorporated review comments.

Project Objective

Physical security is a critical component of cybersecurity and operational security. This evaluation was conducted to identify suitable software solutions for converting TN-Laptop 1 into a dedicated security camera workstation for the new production space.

The selected solution should provide reliable monitoring, motion detection, recording capabilities, remote viewing, ease of deployment, and long-term scalability while supporting operational readiness before the first day of work.

Device Assessment – TN-Laptop 1

Current Endpoint Information

Category	Details
Device Name	TN-Laptop 1
Endpoint Comment	Production Workstation with Camera – Nigel Jordan
Status	Connected
Operating System	Windows 10 (22H2)
Platform	Windows x64
Manufacturer	HP
CPU	AMD E2-9000e Radeon R2, 2 Cores @ 1.5 GHz
GPU	AMD Radeon R2 Graphics
Memory	4 GB DDR4
Storage	466 GB HDD
Network Adapter	Realtek PCIe GbE Family Controller
Wireless Adapter	Realtek RTL8723DE 802.11 b/g/n
IP Address	192.168.100.245
Action1 Agent Version	6.0.663.1
Last Boot Time	June 13, 2026

Endpoint Readiness Assessment

TN-Laptop 1 is currently connected to the Action1 endpoint management platform and is available for remote administration, software deployment, and monitoring.

The system demonstrates several characteristics that make it suitable for security camera deployment:

- Active Action1 management and monitoring
- Available storage capacity for video retention
- Stable network connectivity
- Windows 10 compatibility
- Dedicated production workstation role

However, the device contains limited hardware resources, including 4 GB RAM and a dual-core processor. Therefore, lightweight surveillance software is recommended to ensure stable operation.

Existing Security and Software Assessment

Action1 analysis identified the following conditions:

- Multiple pending software updates
- Outstanding vulnerabilities
- Historical remediation attempts
- Existing business applications including:
 - Google Chrome
 - Microsoft Edge
 - Microsoft Teams
 - Zoom
 - Microsoft Office 365

Several Zoom-related vulnerabilities remain overdue and should be remediated during or after deployment.

Evaluation Criteria

The following criteria were used to evaluate available solutions:

- Ease of installation and configuration
 - Motion detection capabilities
 - Video recording functionality
 - Remote viewing access
 - Alerting and notification features
 - Resource usage on Windows laptops
 - Cost and licensing
 - Security and privacy features
 - Scalability for future expansion
-

Software Options Evaluated

Option 1: ContaCam (Recommended)

Overview

ContaCam is a free video surveillance and live webcam software solution for Windows environments.

Features

- Motion detection recording
- Scheduled recording
- Remote viewing via web server
- Email notifications
- Multiple camera support
- Low system resource consumption

Advantages

- Free for business use
- Lightweight and efficient
- Quick deployment
- Supports USB webcams and IP cameras
- Suitable for older hardware

Limitations

- Basic user interface
- Limited advanced analytics

Assessment

Overall Rating: 9/10

Recommended for immediate deployment due to reliability, low resource requirements, and ease of implementation.

Option 2: Agent DVR

Overview

Agent DVR is an enterprise-grade surveillance platform with advanced monitoring features.

Features

- AI-based motion detection
- Remote web access
- Mobile support
- Multiple camera management
- Recording and alerts

Advantages

- Highly scalable
- Enterprise capabilities
- Advanced monitoring functions

Limitations

- Higher system resource usage
- Certain features may require licensing

Assessment

Overall Rating: 8/10

Recommended for future expansion or advanced surveillance environments.

Option 3: Yawcam

Overview

Yawcam is a lightweight webcam monitoring application for basic surveillance needs.

Features

- Motion detection
- Image capture
- Streaming support
- Basic monitoring functions

Advantages

- Free to use
- Simple installation
- Low hardware requirements

Limitations

- Limited enterprise features
- Reduced scalability

Assessment

Overall Rating: 7/10

Suitable for basic monitoring but less appropriate for long-term expansion.

Comparative Evaluation

Feature	ContaCam	Agent DVR	Yawcam
Cost	Free	Free/Paid	Free

Motion Detection	yes	yes	yes
Recording	yes	yes	yes
Remote Access	yes	yes	Limited
Ease of Deployment	Excellent	Good	Excellent
.	Low	Medium	Low
Scalability	Good	Excellent	Excellent

Hardware Suitability Analysis

Requirement	TN-Laptop 1 Assessment
Webcam Support	Supported
Motion Detection	Supported
Motion Detection	Supported
Video Recording	Supported
Remote Viewing	Supported
Local Storage	Sufficient
CPU Capacity	Adequate for lightweight software
Memory Capacity	Limited
Scalability	Moderate

Overall Suitability Rating: 8/10

TN-Laptop 1 is suitable for deployment as a security camera workstation when paired with lightweight software.

Recommendation

Based on the software evaluation and hardware assessment, **ContaCam** is recommended for deployment on TN-Laptop 1.

Rationale

- Fast implementation before Monday
- Minimal hardware requirements
- Reliable motion detection and recording
- Supports future camera expansion
- No licensing cost
- Compatible with existing hardware limitations

Agent DVR may be evaluated in the future if advanced surveillance capabilities become necessary.

Proposed Next Steps

1. Obtain management approval for software selection.
 2. Uninstall unnecessary applications, including Zoom, to dedicate the device exclusively to security monitoring.
 3. Install ContaCam on TN-Laptop 1.
 4. Configure camera placement in the production space.
 5. Enable motion detection and recording.
 6. Configure retention settings.
 7. Validate remote monitoring functionality.
 8. Test the system before Monday's production launch.
-

Risks and Considerations

Potential implementation considerations include:

- Laptop battery health and power management
- Webcam quality and field of view
- Network reliability for remote access

- Storage requirements for video retention
- Physical placement of the device

Future Expansion Opportunities

Future enhancements may include:

- Additional cameras
- Centralized monitoring dashboard
- Cloud backup-covered by backup solution.
- Motion alert notifications
- Integration with additional security systems

Final Summary

The evaluation determined that ContaCam provides the best balance of functionality, ease of deployment, and cost effectiveness for immediate implementation in the new production space.

Deploying a lightweight surveillance solution on TN-Laptop 1 will improve physical security, support cybersecurity objectives, and enhance operational readiness prior to the first day of production operations.
