Version control table

Version	Date	Author	Description of changes
1.0	6/22/2026	Jephete Fenelon	Initial weekly vulnerability assessment and remediation report documenting endpoint security posture, vulnerability metrics, remediation activities, update compliance, compensating controls, and identified exceptions.
2.0	6/24/2026	Joshua Ugborugbo	Completed review of weekly endpoint vulnerability and remediation report and validated remediation findings, supporting evidence, and recommendations.
2.1	6/27/2026	Jephete Fenelon	Added KPI trend analysis, endpoint-level change tracking, remediation metrics, and management reporting enhancements in response to review feedback.

PURPOSE

The purpose of this report is to provide management with a summary of endpoint security posture, vulnerability remediation activities, update deployment progress, KPI trend analysis,

compensating controls, operational risks, and remediation priorities within the Twigs Naturals environment.

This report supports cybersecurity governance, vulnerability management, endpoint compliance monitoring, remediation effectiveness measurement, and organizational risk reduction activities. The report is intended to provide management with measurable indicators of remediation progress, changes in endpoint risk exposure, and ongoing vulnerability reduction efforts across the managed environment.

SCOPE

This report covers all endpoints currently managed through the Action1 platform during the reporting period of June 22, 2026 through June 29, 2026.

The scope includes:

- Endpoint inventory and connectivity review
 - Vulnerability identification, prioritization, and remediation tracking
 - Vulnerability remediation compliance monitoring
 - Update deployment compliance review
 - Missing update analysis and remediation activities
 - Pending update approval review
 - KPI trend analysis and weekly change tracking
 - Compensating controls documentation
 - Automation execution review
 - Remediation activity verification
 - Endpoint-specific observations and exceptions
 - Operational risk identification and management reporting
 - Recommended remediation actions and follow-up activities
-

EXECUTIVE SUMMARY

This report provides a summary of endpoint security posture, vulnerability management activities, remediation progress, update deployment compliance, compensating controls, update approval activities, and operational exceptions identified within the Twigs Naturals environment during the reporting period of June 22, 2026 through June 29, 2026.

During the reporting period, endpoint vulnerability remediation activities transitioned from assessment and planning into active remediation and deployment operations. Initial remediation efforts focused on connected endpoints capable of immediate treatment, with priority given to systems containing elevated critical vulnerability counts and pending security updates.

A review of the Action1 environment identified 14 managed endpoints, 961 installed software packages, 2,017 detected vulnerabilities, and 569 missing updates across managed systems. Vulnerability remediation compliance review identified 1,713 vulnerabilities requiring attention, including 1,606 overdue vulnerabilities and 107 vulnerabilities approaching remediation deadlines.

Update deployment compliance review identified 389 updates requiring attention, consisting of 384 overdue updates and 5 updates approaching compliance deadlines. A total of 39 critical security updates and 530 additional updates remained pending approval for deployment.

Remediation activities performed during the reporting period included endpoint prioritization, vulnerability analysis, update compliance review, update approval evaluation, deployment planning, update deployment activities, compensating control documentation, endpoint inventory validation, automation history review, remediation tracking, and post-deployment verification activities.

Initial remediation activities were successfully initiated against TN-Laptop1, resulting in successful deployment of multiple application and security updates and validation of the endpoint remediation workflow within the Action1 platform.

Future reporting periods will include KPI trend analysis to measure the rate of change in vulnerabilities, missing updates, remediation activities, endpoint risk reduction, and overall compliance improvements across the environment.

ENVIRONMENT OVERVIEW

Managed Endpoints: 14

Installed Software Packages: 961

Detected Vulnerabilities: 2,017

Missing Updates: 569

Endpoints Seen Within Last 7 Days: 13

Endpoints Seen Within 8–30 Days: 1

Endpoints Requiring Reboot: 0

Environment Status:

Most Managed endpoints continue to report successfully through Action1. Ongoing remediation and compliance activities remain in progress across the environment.

KPI SUMMARY – WEEKLY CHANGE TRACKING

The following KPIs should be included in each weekly endpoint report to show measurable remediation progress and rate of change across the environment.

KPI	Previous Week	Current Week	Change	Status
Managed Endpoints	_____	14	_____	_____
Detected Vulnerabilities	_____	2,017	_____	_____
Missing Updates	_____	569	_____	_____
Vulnerabilities Requiring Attention	_____	1,713	_____	_____
Overdue Vulnerabilities	_____	1,606	_____	_____
Updates Requiring Attention	_____	389	_____	_____
Overdue Updates	_____	384	_____	_____
Critical Security Updates Pending Approval	_____	39	_____	_____
Other Updates Pending Approval	_____	530	_____	_____

Vulnerability Change by Severity

Severity	Previous Week	Current Week	Change	Rate of Change
Critical	_____	97	_____	_____%
High	_____	1,183	_____	_____%
Medium	_____	645	_____	_____%
Low	_____	49	_____	_____%

Endpoint-Level Change Tracking

Endpoint	Previous Critical	Current Critical	Change	Current Status
----------	-------------------	------------------	--------	----------------

MacJoshua	_____	94	_____	Disconnected
TN-Laptop1	_____	92	_____	Connected
JepH F DESKTOP	_____	1	_____	Connected

KPI Observation

The KPI framework has been introduced to measure remediation effectiveness, endpoint risk reduction, and the rate of change in vulnerabilities and missing updates between reporting periods.

VULNERABILITY MANAGEMENT STATUS

Total Vulnerabilities Requiring Attention:
1,713

Overdue Vulnerabilities:
1,606

Approaching Deadline:
107

Critical Vulnerabilities:
96 Overdue
1 Due Within 7 Days

High Vulnerabilities:
1,091 Overdue
78 Due Within 7 Days
14 Due Within 30 Days

Medium Vulnerabilities:
408 Overdue
26 Due Within 7 Days
211 Due Within 30 Days

Low Vulnerabilities:
11 Overdue
2 Due Within 7 Days
20 Due Within 30 Days
16 Due Beyond 30 Days

Observation:

High-severity vulnerabilities continue to represent the largest portion of outstanding remediation activities and should remain the primary remediation focus.

UPDATE DEPLOYMENT COMPLIANCE

Updates Requiring Attention:
389

Overdue Updates:
384

Approaching Deadline:
5

Critical Updates:
36 Overdue
3 Due Within 7 Days

Important Updates:
88 Overdue
2 Due Within 30 Days

Moderate Updates:
5 Overdue

Other Updates:
255 Overdue
2 Due Within 7 Days
14 Due Within 30 Days
15 Due Beyond 30 Days

Observation:

Critical and Important update categories continue to require prioritization to improve overall endpoint compliance.

PENDING UPDATE APPROVALS

Critical Security Updates Pending Approval:
39

Other Updates Pending Approval:
530

Review Findings:

Updates awaiting approval include application updates, operating system updates, firmware updates, driver updates, and security intelligence updates.

Risk Assessment:

Delays in update approval and deployment may increase exposure to known vulnerabilities and extend remediation timelines.

WEEKLY UPDATE REVIEW

Critical Updates Identified:

- Google Chrome
- Microsoft Edge
- Google Chrome Enterprise
- Google Chrome (macOS)
- Microsoft Teams Classic

Important Updates Identified:

- Microsoft Visual C++ 2015–2022 Redistributable
- Dell Command Update for Windows Universal
- Microsoft Excel (macOS)
- Microsoft Word (macOS)
- Paint.NET

Additional Updates Identified:

- Microsoft Teams (MSIX)
- OBS Studio
- Zoom
- Microsoft Defender Security Intelligence Updates
- Multiple Zorin OS Packages
- Multiple Linux System Components
- Driver and Firmware Updates

Observation:

Browser, operating system, driver, firmware, and third-party application updates continue to contribute to the overall missing update count.

COMPENSATING CONTROLS DOCUMENTED

Software:

Adobe Reader X (10.1.1)

Activity:

Compensating controls were documented within Action1 for vulnerabilities affecting Adobe Reader X where direct remediation was not immediately available.

Purpose:

To document mitigation measures, maintain audit records, and support risk management activities pending software replacement, upgrade, or alternative remediation.

AUTOMATION EXECUTION REVIEW

Completed automation activities reviewed included:

- Application update deployment activities
- Microsoft Visual C++ update deployment
- Microsoft Teams deployment activities
- Microsoft Edge deployment activities
- Google Chrome Enterprise deployment activities
- Endpoint reboot activities
- Linux endpoint maintenance activities
- User notification and reboot messaging activities

Endpoints Affected:

- MacJoshua
- Enjoy-Laptop
- TN-Laptop 1
- TN-Production
- ZOC

Observation:

Automation execution history confirms successful completion of multiple remediation and maintenance activities during the reporting period.

ENDPOINT OBSERVATIONS

Endpoints identified with elevated vulnerability counts include:

MacJoshua

94 Critical Vulnerabilities

178 Non-Critical Vulnerabilities

TN-Laptop 1

92 Critical Vulnerabilities

137 Non-Critical Vulnerabilities

JepH F DESKTOP

1 Critical Vulnerability

34 Non-Critical Vulnerabilities

Observation:

These endpoints continue to contribute significantly to the overall vulnerability count and should remain prioritized during remediation planning activities.

ACTIONS COMPLETED DURING THE REPORTING PERIOD

- Reviewed endpoint inventory and connectivity status.
 - Reviewed vulnerability remediation compliance metrics.
 - Reviewed update deployment compliance metrics.
 - Reviewed pending update approvals.
 - Evaluated missing security updates and patch requirements.
 - Documented compensating controls.
 - Reviewed automation execution history.
 - Verified remediation activity records.
 - Updated endpoint vulnerability reporting documentation.
 - Conducted remediation planning and compliance review activities.
-

EXCEPTIONS

Several endpoints continue to contain elevated vulnerability counts due to pending remediation activities, update approval requirements, maintenance scheduling, software compatibility considerations, and endpoint availability.

Certain vulnerabilities remain documented under compensating controls pending software replacement, upgrade, or alternative remediation actions.

RECOMMENDED NEXT ACTIONS

- Prioritize remediation of Critical and High severity vulnerabilities.
- Review and approve pending security updates.
- Continue deployment of overdue updates.
- Review endpoints with elevated vulnerability concentrations.
- Validate compensating controls.
- Monitor remediation deadlines.
- Continue weekly vulnerability reporting and remediation tracking.
- Reduce outstanding vulnerability exposure through ongoing patch management activities.

Final summary

Endpoint vulnerability management, update compliance monitoring, remediation tracking, compensating control documentation, and automation review activities remain ongoing within the Twigs Naturals environment.

The findings and observations documented within this report will continue to support remediation planning, update deployment activities, and endpoint security management efforts during the next reporting period.

Overall Status: Active Remediation Phase

Next Review Date: June 29, 2026

Appendix A – Endpoint Security Dashboard

Screenshot: Dashboard Overview

Description:

Action1 dashboard showing managed endpoints, installed software, detected vulnerabilities, missing updates, and endpoint connectivity status as of June 2026.

Appendix B – Vulnerability Remediation Compliance

Screenshot: Vulnerability Remediation Compliance gauge

Description:

Vulnerability remediation compliance summary showing overdue vulnerabilities, upcoming remediation deadlines, and overall vulnerability management status.

Appendix C – Update Deployment Compliance
