Version Tracking table

Version	Date	Author	Department	Reviewer/ Approver	Description
1.0	7/06/2026	Jephete Fenelon	Information Technology	Nigel Jordan	Initial release of the Action1 Weekly Vulnerability Remediation and Patch Management Summary for the reporting period July 6, 2026 through July 13, 2026, including baseline vulnerability metrics, patch management statistics, and remediation activities across managed endpoints.
1.1	7/07/2026	Jephete Fenelon	Information Technology	Nigel Jordan	Updated weekly report to include KPI tracking, endpoint availability analysis, exception management, remediation compliance metrics, and additional operational reporting details.
1.2	7/08/2026	Jephete Fenelon	Information Technology	Nigel Jordan	Updated operational activities, project status, TN-Laptop1 Security Camera Project progress, Cloudflare implementation status, operational findings, recommendations, and planned activities to reflect current implementation and final validation progress.

PURPOSE

The purpose of this weekly report is to provide visibility into the current vulnerability landscape, patch management activities, remediation progress, and endpoint compliance status across environments managed through the Action1 Endpoint Management platform.

This report supports organizational cybersecurity and operational objectives by:

- Monitoring endpoint vulnerability exposure.
 - Tracking missing updates and patch compliance.
 - Supporting remediation prioritization activities.
 - Identifying operational risks and remediation blockers.
 - Improving endpoint visibility and accountability.
 - Supporting management decision-making through KPI reporting.
 - Monitoring remediation service level agreement (SLA) compliance.
 - Supporting continuous improvement of endpoint security posture.
 - Providing historical tracking of remediation progress and operational trends.
-

SCOPE

This report applies to all endpoints enrolled within the Action1 Endpoint Management platform during the reporting period and includes environments managed under both the **Twigs Naturals** and **Philip Augustine** organizations.

Included Within Scope

- Endpoint inventory review
- Vulnerability assessment activities
- Missing update analysis
- Operating system patch management
- Third-party application patch management
- Browser update management
- Firmware update visibility
- Driver update visibility
- Vulnerability remediation tracking
- Update deployment monitoring
- SLA compliance monitoring
- Endpoint availability analysis
- Exception tracking activities
- Weekly KPI reporting
- Operational risk assessment
- Remediation trend analysis

Excluded From Scope

- Malware eradication activities
 - Incident response activities
 - Security Operations Center investigations
 - Firewall administration
 - Network infrastructure management
 - Server infrastructure administration
 - Domain administration activities
 - Penetration testing activities
 - Security awareness training activities
 - Physical security controls
-

Executive Summary

During the reporting period of **July 6, 2026 through July 13, 2026**, ongoing vulnerability management, patch management, and endpoint remediation activities continued across the **Twigs Naturals** and **Philip Augustine** Action1 organizations.

The assessment identified continued exposure associated with operating system updates, browser vulnerabilities, third-party software updates, firmware updates, and endpoint availability limitations affecting remediation operations.

A total of **16 managed endpoints** were visible across both organizations during this reporting period, consisting of **14 endpoints within Twigs Naturals** and **2 endpoints within the Philip Augustine organization**.

At the time of this assessment, the managed environment contained:

- **784 identified vulnerabilities**
- **320 missing updates**
- **14 critical update approvals pending**
- **109 vulnerabilities requiring immediate attention within Twigs Naturals**
- **270 vulnerabilities requiring immediate attention within the Philip Augustine organization**

The primary operational risk continues to be endpoint availability and delayed remediation activity rather than evidence of active compromise or security incidents.

Management Dashboard

KPI	Status
Managed Endpoints	16
Total Vulnerabilities	784

Total Missing Updates	320
Critical Updates Pending	14
Endpoints Requiring Reboot	2
Report Status	Active

Reporting Period Comparison (Baseline)

Metric	Previous Period	Current Period	Change	Trend
Managed Endpoints	N/A	16	N/A	Baseline
Total Vulnerabilities	N/A	784	N/A	Baseline
Missing Updates	N/A	320	N/A	Baseline
Critical Updates Pending	N/A	14	N/A	Baseline
Endpoints Requiring Reboot	N/A	2	N/A	Baseline

Reporting Note: This reporting period establishes the baseline for future week-over-week comparisons across the combined Twigs Naturals and Philip Augustine Action1 environments. Beginning with the next reporting cycle, this section will compare current results against this baseline using consistent reporting metrics and scope.

Key Performance Indicators (KPIs)

KPI	Twigs Naturals	Philip Augustine	Combined Total
Managed Endpoints	14	2	16
Installed Software	930	155	1,085

Packages			
Vulnerabilities Identified	111	673	784
Missing Updates	96	224	320
Critical Update Approvals Pending	7	7	14
Other Updates Pending	217	217	434
Endpoints Seen Within 7 Days	14	2	16
Endpoints Offline 31+ Days	0	0	0
Reboots Required	2	0	2

Vulnerability Management KPIs

Twigs Naturals

Metric	Value
Vulnerabilities Requiring Attention	109
Overdue Vulnerabilities	87
Due Soon	22
Critical Vulnerabilities Overdue	8
High Severity Vulnerabilities Overdue	81
Medium Severity Vulnerabilities Due Soon	22
Low Severity Vulnerabilities Outstanding	1

Philip Augustine

Metric	Value
Vulnerabilities Requiring Attention	270
Overdue Vulnerabilities	206
Due Soon	64
Critical Vulnerabilities Overdue	6
High Severity Vulnerabilities Overdue	76
Medium Severity Vulnerabilities Outstanding	379
Low Severity Vulnerabilities Outstanding	15

Patch Management KPIs

Twigs Naturals

Metric	Value
Updates Requiring Attention	69
Overdue Updates	62
Updates Due Soon	7
Critical Updates Overdue	2
Important Updates Overdue	1
Other Updates Overdue	59

Philip Augustine

Metric	Value
Updates Requiring Attention	204
Overdue Updates	197
Updates Due Soon	7
Critical Updates Overdue	4
Important Updates Overdue	11
Other Updates Overdue	178

High Risk Endpoint Summary

Twigs Naturals

Enjay-Laptop

- Disconnected
- 6 critical vulnerabilities identified
- 101 non-critical vulnerabilities identified
- Endpoint currently unavailable for remediation activities

TN-Production

- Reboot required
- Outstanding update backlog remains active

TN-Laptop1

- Connected
- Cloudflare troubleshooting activities performed
- Camera validation activities remain dependent on local service verification

MacJoshua

- Disconnected
 - Endpoint unavailable for remediation activities
-

Philip Augustine

TN-MacBook-Yves

- Connected
- 66 critical vulnerabilities identified
- 564 non-critical vulnerabilities identified
- Active remediation candidate

Laptop-Jurema

- Disconnected
 - 64 critical vulnerabilities identified
 - 413 non-critical vulnerabilities identified
 - Endpoint unavailable for remediation activities
-

Major Vulnerability Sources Identified

The majority of identified vulnerabilities continue to originate from:

- Adobe Reader
 - Adobe Illustrator
 - Zoom
 - Google Chrome
 - Microsoft Edge
 - Microsoft Teams
 - MySQL Workbench
 - Safari
 - Visual Studio Code
 - macOS updates
 - Driver packages
 - Firmware updates
 - Microsoft .NET Framework updates
-

Operational Activities Performed During the Reporting Period

During this reporting period, the following operational activities were completed in support of vulnerability management, patch management, endpoint administration, operational reporting, and ongoing infrastructure support across the Action1 Endpoint Management platform.

Vulnerability Management

- Reviewed the Action1 vulnerability dashboard to identify current endpoint security exposure.
- Assessed critical, high, medium, and low severity vulnerabilities across managed endpoints.
- Prioritized remediation candidates based on vulnerability severity and endpoint availability.
- Reviewed vulnerability trends to support ongoing remediation planning.

Patch Management

- Reviewed operating system updates requiring deployment.
- Reviewed third-party application updates requiring remediation.
- Monitored browser update compliance across managed endpoints.
- Reviewed pending update approvals and deployment readiness.
- Assessed firmware and driver updates requiring additional validation.

Endpoint Management

- Validated endpoint inventory across the Twigs Naturals and Philip Augustine organizations.
- Reviewed endpoint connectivity and availability status.
- Identified disconnected endpoints affecting remediation activities.
- Reviewed endpoints requiring system reboots following update deployment.
- Monitored endpoint compliance and update status.

Documentation and Reporting

- Updated weekly KPI metrics and operational reporting data.
- Documented vulnerability findings and remediation progress.
- Updated operational exception tracking records.
- Prepared the weekly Action1 Vulnerability Remediation and Patch Management Summary.
- Reviewed remediation trends to support management reporting.

Technical Support and Project Activities

- Reviewed Cloudflare Tunnel connectivity associated with TN-Laptop1.
- Continued support for the TN-Laptop1 Security Camera Deployment and Remote Monitoring Project.
- Reviewed the current implementation status of the Cloudflare Tunnel deployment.
- Confirmed Cloudflare Tunnel connectivity remained operational.
- Reviewed remaining endpoint validation requirements.
- Updated project documentation to reflect the current implementation status.
- Prepared a technical handoff summarizing completed implementation activities, current project status, and remaining validation steps following management direction.

- Coordinated with the project team to support completion of the remaining endpoint validation activities through Action1 Remote Connect.
-

Exceptions

The following operational exceptions continued to impact remediation and project activities during this reporting period:

- Multiple endpoints remained disconnected and unavailable for remediation activities.
 - Several endpoints were unavailable for software deployment or update installation due to user availability.
 - Certain remediation activities require scheduled endpoint reboots.
 - Final validation activities for the TN-Laptop1 Security Camera Project remain in progress and are dependent upon completion of endpoint verification through Action1 Remote Connect.
 - Some firmware and driver updates require additional compatibility validation before deployment.
-

Recommendations

The following actions are recommended to support continued operational improvement:

- Continue prioritizing deployment of critical security updates.
 - Improve endpoint availability during scheduled maintenance windows.
 - Reduce overdue vulnerabilities through planned remediation activities.
 - Continue monitoring firmware and driver update requirements.
 - Coordinate with endpoint owners to improve remediation availability.
 - Continue weekly KPI reporting to monitor remediation progress.
 - Complete the remaining endpoint validation activities for the TN-Laptop1 Security Camera Project and update project documentation with the final implementation results upon completion.
-

Exceptions

The following operational exceptions continue to impact remediation progress:

- Multiple endpoints remain disconnected and unavailable for remediation activities.
- Several endpoints have not been made available by end users for agent installation or update deployment activities.
- Certain remediation activities require endpoint reboot scheduling.

- Remote validation activities for TN-Laptop1 could not be completed due to Action1 Remote Connect permission limitations for the TN endpoint group.
 - Some firmware and driver updates require additional validation prior to deployment.
-

Recommendations

The following actions are recommended to improve remediation effectiveness:

- Continue prioritizing deployment of critical security updates.
 - Improve endpoint availability during maintenance windows.
 - Reduce overdue vulnerabilities through scheduled remediation activities.
 - Continue monitoring firmware and driver update requirements.
 - Review disconnected endpoints and coordinate with users for availability.
 - Continue weekly KPI reporting to monitor remediation progress.
-

Risk Assessment

The current environment risk profile continues to be driven primarily by:

- Endpoint availability limitations.
- Deferred patch management activities.
- Browser update backlog.
- Third-party application update backlog.
- Firmware and driver update backlog.
- Delayed user participation in onboarding and remediation activities.

No evidence of the following was identified during this reporting period:

- Malware activity
- Ransomware activity
- Active compromise indicators
- Unauthorized software deployment
- Active security incidents

The current exposure profile remains operational and maintenance related rather than incident related.

Operational Findings

The weekly assessment identified several operational trends affecting endpoint security and remediation activities.

Key observations include:

- Endpoint visibility remained consistent throughout the reporting period.
 - Critical vulnerabilities continue to be concentrated within browser and third-party application updates.
 - Multiple endpoints remain unavailable for remediation due to connectivity and availability constraints.
 - Firmware and driver updates continue to contribute to the remediation backlog.
 - Cloudflare Tunnel deployment has been successfully implemented and validated. The project has progressed to its final validation phase, with the remaining endpoint verification activities being completed through Action1 Remote Connect prior to project closure.
-

Planned Activities for Next Reporting Period

Planned activities for the upcoming reporting cycle include:

- Continue remediation activities across available endpoints.
 - Prioritize deployment of critical security updates.
 - Improve endpoint availability for remediation operations.
 - Continue vulnerability reduction efforts.
 - Review failed update deployments by identifying the root cause of each failure, implementing corrective actions, redeploying updates where appropriate, and validating successful installation through Action1.
 - Continue KPI tracking and reporting activities.
 - Support onboarding activities where required.
 - Complete the remaining TN-Laptop1 endpoint validation activities, finalize the TN-Laptop1 Security Camera Deployment and Remote Monitoring Project, and update the project documentation to reflect the final implementation results and project closure.
-

Report Data Sources

This report was prepared using operational data collected from the Action1 Endpoint Management platform, including:

- Dashboard Overview
 - Endpoint Inventory
 - Weekly Update Summary
 - Vulnerability Dashboard
 - Patch Management Dashboard
 - Pending Update Approvals
 - Endpoint Compliance Dashboard
 - Vulnerability Compliance Dashboard
-

Project Updates

TN-Laptop1 Security Camera Deployment and Remote Monitoring Project

Current Status: Final Validation in Progress

Progress This Reporting Period

- Cloudflare Tunnel implementation remains operational.
 - Project documentation updated.
 - Technical handoff prepared.
 - Final endpoint validation assigned through project collaboration.
 - Remaining validation activities scheduled prior to project closure.
-

Conclusion

The **Action1 Weekly Vulnerability Remediation and Patch Management Summary** continues to provide operational visibility into the organization's endpoint security posture through centralized monitoring, vulnerability assessment, patch management, and remediation tracking.

This reporting period demonstrated continued progress in monitoring endpoint compliance, identifying remediation priorities, and tracking operational risks across both the Twigs Naturals and Philip Augustine environments. Although endpoint availability, disconnected devices, and outstanding updates remain the primary challenges affecting remediation efforts, the Action1 platform continues to provide the visibility necessary to support informed decision-making and ongoing vulnerability reduction.

Continued weekly reporting, KPI monitoring, and coordinated remediation activities will support the organization's long-term cybersecurity objectives, improve endpoint resilience, and strengthen overall operational maturity.

During this reporting period, project documentation was further enhanced to support ongoing operational activities and knowledge transfer. In addition to vulnerability management and patch monitoring, continued progress was made toward completing the TN-Laptop1 Security Camera Deployment and Remote Monitoring Project. The project has entered its final validation phase and will be updated with the remaining implementation findings following completion of the final endpoint verification activities.
